ATCA-Tester now fully compliant with PICMG 3.0 R2.0 Advanced TCA Base Specification ECN-002

Lexington, Massachusetts, October 1, 2007 - Polaris Networks today released the latest version (Release 2.0.0) of its ATCA-Tester. The previous version of the tester was 1.8.2.

This new release fixes several outstanding bugs and makes the tester fully compliant with PICMG 3.0 R2.0 Advanced TCA Base Specification ECN-002. Also featured is a new licensing mechanism and several user-friendly features. The current users of the tester can get this free update by contacting the company at sales@polarisnetworks.net

Commenting on this release, Sujit Purkayastha, Vice President, Business Development stated, “this is a maintenance release and we plan to add a number of substantive enhancements in the next release scheduled later in the year. Besides, we also have plans to extend our coverage to include μ -TCA.”

The ATCA-Tester continues to serve as the IPMI Manageability Test Tool for the Communication Platforms Trade Association’s (CP-TA) certification test suite and is currently in use worldwide at leading companies involved with the ATCA technology.

About Polaris Networks

Polaris Networks has a long history of playing critical roles in various standards bodies (ZigBee Alliance, EPCglobal, WiMAX Forum, CP-TA etc.) in terms of creating interoperability guidelines and developing test tools that help manufacturers and service providers meet compliance requirements. Additionally Polaris provides software development services to companies seeking to augment their own R & D resources with competent professional help from outside and bring new products and enhancements to the market quickly.
